Overview

HP FlexFabric 7900 Switch Series

Models

HP FlexFabric 7904 Switch Chassis	JG682A
HP FlexFabric 7910 Switch Chassis	JG841A

Key features

- Nonblocking and lossless Clos architecture
- Data center focused feature set
- Enhanced modularity with control and data plane separation
- High 10 GbE and 40 GbE density across 9.6 Tbps switch fabric

Product overview

HP FlexFabric 7900 Switch Series is the next generation compact modular data center core switch designed to support virtualized data centers and evolution needs of private and public clouds deployments.

The 7900 delivers unprecedented levels of performance, buffering, scale, and availability with high density 10 GbE and 40 GbE interfaces using only a fraction of the foot print used by traditional chassis. The switch supports full Layer 2 and 3 features along with advanced data center features.

Features and benefits

Product architecture

- **Modern scalable system architecture**
  provides nonblocking, lossless Clos architecture with VOQs and large buffers with the flexibility and scalability for future growth
- **Distributed architecture with separation of data and control planes**
  delivers enhanced fault tolerance and facilitates continuous operation and zero service disruption during planned or unplanned control-plane events
- **Advanced Comware modular operating system**
  brings native high stability, independent process monitoring, and restart through the modular design and multiple processes of HP Comware v7 software; supports enhanced serviceability functions

Performance

- **High-performance fully distributed architecture**
  delivers up to 9.6 Tb/s switching capacity and 5.94 Bpps throughput with nonblocking wirespeed performance
- **High-density 1/10GbE and 40GbE interface connectivity**
  Offers up to 10 interface module slots to scale up to 120 40GbE or 480 10GbE or 240 1/10GbE ports
- **Distributed scalable fabric architecture**
  integrated fabric and management modules to deliver more than 1 Tb per slot bandwidth

Resiliency and high availability

- **Intelligent Resilient Framework (IRF)**
  creates virtual resilient switching fabrics, where two or more switches perform as a single L2 switch and L3 router; servers or switches can be attached using standard LACP for automatic load balancing and high availability there by eliminating the need for complex protocols and simplifying network operations
- **Redundant/load-sharing fan assemblies, and power supplies**
  increase total performance and power availability while providing hitless, stateful failover

Overview

- **Hot-swappable modules**
  allows replacement of modules without any impact on other modules
- **Graceful restart**
  allows routers to indicate to others their capability to maintain a routing table during a temporary shutdown, which significantly reduces convergence times upon recovery; supports OSPF, BGP, and IS-IS
- **Virtual Router Redundancy Protocol** (VRRP)
  allows groups of two routers to dynamically back each other up to create highly available routed environments
- **Device Link Detection Protocol** (DLDP)
  monitors link connectivity and shuts down ports at both ends if unidirectional traffic is detected, preventing loops in STP based networks
- **IEEE 802.3ad Link Aggregation Control Protocol** (LACP)
  supports up to 1024 trunk groups and up to 16 members per trunk; supports static or dynamic groups and a user-selectable hashing algorithm
- **Mid plane free chassis design**
  delivers increased system reliability and optimal airflow as the chassis has no mid plane and line cards connect directly to the onboard fabric card
- **Ultrafast protocol convergence** (subsecond) **with standard-based failure detection—Bidirectional Forwarding Detection** (BFD)
  enables link connectivity monitoring and reduces network convergence time for RIP, OSPF, BGP, IS-IS and VRRP

Layer 2 switching

- **VLAN**
  supports up to 4,094 port-based or IEEE 802.1Q-based VLANs
- **Port mirroring**
  duplicates port traffic (ingress and egress) to a local or remote monitoring port; supports four mirroring groups, with an unlimited number of ports per group
- **Port isolation**
  increases security by isolating ports within a VLAN while still allowing them to communicate with other VLANs
- **Internet Group Management Protocol** (IGMP) **and Multicast Listener Discovery** (MLD) **protocol snooping**
  controls and manages the flooding of multicast packets in a Layer 2 network
- **Spanning Tree Protocol** (STP)
  supports standard IEEE 802.1D STP, IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) for faster convergence, and IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)

Layer 3 routing

- **Open shortest path first** (OSPF)
  delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery
- **Intermediate system to intermediate system** (IS-IS)
  uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)
- **Border Gateway Protocol 4** (BGP-4)
  delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates; supports extensive policies for increased flexibility; scales to very large networks
- **Equal-Cost Multipath** (ECMP)
  enables multiple equal-cost links in a routing environment to increase link redundancy and scale bandwidth
- **Unicast Reverse Path Forwarding** (uRPF)
  limits erroneous or malicious traffic in accordance with RFC 3074
- **Static IPv4 routing**
  provides simple manually configured IPv4 routing
- **Routing Information Protocol** (RIP)

Overview

uses a distance vector algorithm with UDP packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection

- **IP performance optimization**
  provides a set of tools to improve the performance of IPv4 networks; includes directed broadcasts, customization of TCP parameters, support of ICNP error packets, and extensive display capabilities
- **Unicast Reverse Path Forwarding (uRPF)**l
  limits erroneous or malicious traffic in accordance with RFC 3074

Quality of Service (QoS)

- **IEEE 802.1p prioritization**
  delivers data to devices based on the priority and type of traffic
- **Flexible classification**
  creates traffic classes based on access control lists (ACLs), IEEE 802.1p precedence, IP, and DSCP or Type of Service (ToS) precedence; supports filter, redirect, mirror, remark, and logging
- **Bandwidth shaping**
  - Port-based rate limiting provides per-port ingress-/egress-enforced increased bandwidth
  - Classifier-based rate limiting uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port
  - Reduced bandwidth provides per-port, per-queue egress-based reduced bandwidth
- **Broad QoS feature set**
  provides support for Strict Priority Queuing (SP), Weighted Fair Queuing (WFQ), Weighted Deficit Round Robin(WDRR), SP+WDRR together, configurable buffers and Explicit Congestion Notification (ECN)
- **Traffic policing**
  supports Committed Access Rate (CAR) and line rate

Layer 3 services

- **Address Resolution Protocol** (ARP)
  determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network
- **User Datagram Protocol** (UDP) **helper**
  redirects UDP broadcasts to specific IP subnets to prevent server spoofing
- **Dynamic Host Configuration Protocol** (DHCP)
  simplifies the management of large IP networks and supports client and server; DHCP Relay enables DHCP operation across subnets

Management

- **Management interface control**
  enables or disables each of the following interfaces depending on security preferences: console port, Telnet port, or reset button
- **Industry-standard CLI with a hierarchical structure**
  reduces training time and expenses, and increases productivity in multivendor installations
- **SNMPv1, v2, and v3**
  provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption
- **sFlow** (RFC 3176)
  provides scalable ASIC-based wirespeed network monitoring and accounting with no impact on network performance; this allows network operators to gather a variety of sophisticated network statistics and information for capacity planning and real-time network monitoring purposes
- **Remote monitoring** (RMON)
  uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a

Overview

private alarm extension group
- **Debug and sampler utility**
  supports ping and traceroute
- **Network Time Protocol** (NTP)
  synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock dependent devices within the network so that the devices can provide diverse applications based on the consistent time
- **Network Quality Analyzer** (NQA)
  analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays and file transfer rates; allows a network manager to determine overall network performance and to diagnose and locate network congestion points or failures
- **IEEE 802.1AB Link Layer Discovery Protocol** (LLDP)
  advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications

Connectivity

- **Jumbo frames**
  allows high-performance backups and disaster-recovery systems with a maximum frame size of 12288 bytes
- **Loopback**
  supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility
- **Monitor link**
  collects statistics on performance and errors on physical links, increasing system availability
- **Packet storm protection**
  protects against unknown broadcast, unknown multicast, or unicast storms with user-defined thresholds
- **Flow control**
  provides back pressure using standard IEEE 802.3x, reducing congestion in heavy traffic situations

Security

- **Access control list** (ACL)
  used for filtering traffic to prevent unauthorized users from accessing the network, or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times
- **Remote Authentication Dial-In User Service** (RADIUS)
  eases switch security access administration by using a password authentication server
- **Secure shell** (SSHv2)
  uses external servers to securely log in to a remote device; with authentication and encryption, it protects against IP spoofing and plain-text password interception; increases the security of Secure FTP (SFTP) transfers
- **DHCP snooping**
  helps ensure that DHCP clients receive IP addresses from authorized DHCP servers and maintain a list of DHCP entries for trusted ports; prevents reception of fake IP addresses and reduces ARP attacks, improving security
- **IP Source Guard**
  filters packets on a per-port basis, which prevents illegal packets from being forwarded
- **ARP attack protection**
  protects against attacks that use a large number of ARP requests, using a host-specific, user-selectable threshold

Multicast support

- **Internet Group Management Protocol** (IGMP)
  utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3
- **Protocol Independent Multicast** (PIM)

Overview

defines modes of multicasting to allow one-to-many and many-to-many transmission of information; PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM) are supported

Warranty and support

- **1-year warranty**
  advance hardware replacement with 10-calendar-day delivery (available in most countries)
- **Electronic and telephone support**
  limited electronic and business-hours telephone support is available from HP for the entire warranty period; to reach our support centers, refer to: www.hp.com/networking/contact-support; for details on the duration of support provided with your product purchase, refer to: www.hp.com/networking/warrantysummary
- **Software releases**
  to find software for your product, refer to: www.hp.com/networking/support; for details on the software releases available with your product purchase, refer to: www.hp.com/networking/warrantysummary

Summary of Changes

Date	Version History	Action	Description of Change:
30-Mar-2015	From Version 5 to 6	Added	Added new SKUs and supported transceivers: • JG683B • JG845A • JD092B • JD093B • JD094B • JG234A • JD095C • JD096C • JD097C • JG081C • JC784C • JD089B • JD098B • JD099B • JD103A • JD062A • JD118B • JD119B • JD061A • JD063B • JD109A • JD110A • JD111A • JD112A • JD113A • JD114A • JD115A • JD116A • JG325B • K2Q46A • K2Q47A
17-Feb-2015	From Version 4 to 5	Removed	Removed supported transceivers from the Configuration section
01-Dec-2014	From Version 3 to 4	Added	Added 1 New model JG841A
		Changed	Updated Key features, Product overview, Features and benefits
03-Jul-2014	From Version 2 to 3	Changed	Switch Chassis, Internal Power Supplies, and Fan Trays were revised in Configuration.
26-Jun-2014	From Version 1 to 2	Changed	Updated the Power Supply specifications.
