Overview

HP FlexFabric 11900 Switch Series

Models

HP FlexFabric 11908-V Switch Chassis

JG608A

Key features

- High-performance CLOS-based switching architecture
- Large layer 2 scaling with TRILL and HP IRF
- Feature-rich routing with IPv4/IPv6, MPLS, and QoS
- Enhanced modularity with control and data plane separation
- High 10GbE and 40GbE density; 100GbE ready across 7.7 Tb/s switch fabric

Product overview

The HP FlexFabric 11900 Switch Series is a high-performance data center aggregation switch that provides line-rate, high-density 10GbE and 40GbE connectivity designed for cost-effective end-of-row (EoR) and small core deployments.

With latency as low as 3 µs, the HP FlexFabric 11900 Switch Series can scale to 384 1/10GbE, 192 1/10GBASE-T, 64 40GbE or 16 100GbE ports. The switch delivers up to 7.7 Tbps switching capacity and 5.8 Bpps forwarding throughput. A broad variety of interface options is available, including 1/10GbE, 1/10GBASE-T, 40GbE and 100GbE.

Ready for software-defined networking (SDN), the switch supports full Layer 2 and 3 features, including advanced features such as transparent Interconnection of Lots of Links (TRILL) and Intelligent Resilient Framework (IRF), which provides the ability to build large, resilient switching fabrics. The HP FlexFabric 11900 Switch Series also supports fully redundant and hot-swappable components to complement its other enterprise-class capabilities.

Features and benefits

Data center optimized

Scalable Layer 2 fabrics

builds flexible, resilient and scalable Layer 2 fabrics with TRILL together with HP IRF

NEW Multitenant Device Context (MDC)

virtualizes a physical switch into multiple logical devices, with each logical switch having its own processes, configuration, and administration

• Data Center Bridging (DCB) protocols

supports IEEE 802.1Qaz Data Center Bridging Exchange (DCBX) and Enhanced Transmission Selection (ETS) and IEEE 802.1Qbb Priority Flow Control (PFC) for converged fabrics

• Fibre Channel over Ethernet (FCoE) capabilities

delivers support for FCoE, including expansion, fabric, trunk VF and N ports, and aggregation of E-port and N-port virtualization

- Edge Virtual Bridging (EVB) with Virtual Ethernet Port Aggregator (VEPA) support

 provides connectivity into the virtualization ready data center equipment.
 - provides connectivity into the virtualization-ready data center environment
- Front-to-back airflow design

accomodates deployment in data centers utilizing hot-cold aisles

Performance

• High-performance fully-distributed architecture

delivers up to 7.7 Tbps switching capacity and 5.76 Bpps throughput with non-blocking wire-speed performance and latency as low as 3 microseconds

• High-density 1/10GbE and 40GbE interface connectivity

Overview

offers up to eight interface module slots to scale up to 384 1GbE/10GbE and 64 40GbE ports

Scalable system design

provides investment protection to support future technologies and higher-speed connectivity, as the switch is designed for increased backplane bandwidth

Product architecture

• Advanced Comware modular operating system

brings native high stability, independent process monitoring and restart through the modular design and multiple processes of HP Comware v7 software; supports enhanced serviceability functions

In-Service Software Upgrade (ISSU)

provides an upgrade of the entire chassis, or an individual task or process, with zero packet loss

• Distributed architecture with separation of data and control planes

delivers enhanced fault tolerance and facilitates continuous operation and zero service disruption during planned or unplanned control-plane events

Resiliency and high availability

Intelligent Resilient Framework (IRF)

creates virtual resilient switching fabrics, where two or more switches perform as a single L2 switch and L3 router; switches do not have to be co-located and can be part of a disaster-recovery system; servers or switches can be attached using standard LACP for automatic load balancing and high availability; can eliminate the need for complex protocols like Spanning Tree Protocol, Equal-Cost Multipath (ECMP), or VRRP, thereby simplifying network operation

• Redundant/load-sharing fabrics, management, fan assemblies, and power supplies increases total performance and power available while providing hitless, stateful failover

Hot-swappable modules

allows replacement of modules without any impact on other modules

Graceful restart

allows routers to indicate to others their capability to maintain a routing table during a temporary shutdown and significantly reduces convergence times upon recovery; supports OSPF, BGP, and IS-IS

Virtual Router Redundancy Protocol (VRRP)

allows groups of two routers to dynamically back each other up to create highly available routed environments

• Device Link Detection Protocol (DLDP)

monitors link connectivity and shuts down ports at both ends if unidirectional traffic is detected, preventing loops in STP-based networks

Hitless patch upgrades

allows patches and new service features to be installed without restarting the equipment, increasing network uptime and facilitating maintenance

IEEE 802.3ad Link Aggregation Control Protocol (LACP)

supports up to 1024 trunk groups and up to 16 members per trunk; supports static or dynamic groups and a userselectable hashing algorithm

• Passive design system

delivers increased system reliability as backplane has no active components

 Ultrafast protocol convergence (subsecond) with standard-based failure detection—Bidirectional Forwarding Detection (BFD)

enables link connectivity monitoring and reduces network convergence time for RIP, OSPF, BGP, IS-IS, VRRP, MPLS, and IRF

Layer 2 switching

VLAN

supports up to 4,094 port-based or IEEE 802.1Q-based VLANs; also supports MAC-based VLANs, protocol-based VLANs, and IP-subnet-based VLANs for added flexibility

Bridge Protocol Data Unit (BPDU) tunneling

Overview

transmits Spanning Tree Protocol BPDUs transparently, allowing correct tree calculations across service providers, WANs, or MANs

Port mirroring

duplicates port traffic (ingress and egress) to a local or remote monitoring port; supports four mirroring groups, with an unlimited number of ports per group

Spanning Tree Protocol (STP)

supports standard IEEE 802.1D STP, IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) for faster convergence, and IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)

 Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) protocol snooping controls and manages the flooding of multicast packets in a Layer 2 network

IEEE 802.1ad QinQ and selective QinQ

increase the scalability of an Ethernet network by providing a hierarchical structure; connect multiple LANs on a high-speed campus or metro network

• Per-VLAN Spanning Tree Plus (PVST+)

allows each VLAN to build a separate spanning tree to improve link bandwidth usage in network environments with multiple VLANs

Isolation at data link layer with private VLANs

provides, through a two-tier VLAN structure, an additional layer of protection, simplifying network configuration while saving VLAN resources

Layer 3 routing

Open shortest oath first (OSPF)

delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery

Intermediate system to intermediate system (IS-IS)

uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)

Border Gateway Protocol 4 (BGP-4)

delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates; supports extensive policies for increased flexibility; scales to very large networks

Multiprotocol Label Switching (MPLS)

uses BGP to advertise routes across Label Switched Paths (LSPs), but uses simple labels to forward packets from any Layer 2 or Layer 3 protocol, which reduces complexity and increases performance; supports graceful restart for reduced failure impact; supports LSP tunneling and multilevel stacks

Dual IP stack

maintains separate stacks for IPv4 and IPv6 to ease the transition from an IPv4-only network to an IPv6-only network design

Equal-Cost Multipath (ECMP)

enables multiple equal-cost links in a routing environment to increase link redundancy and scale bandwidth

Policy-based routing

makes routing decisions based on policies set by the network administrator

Static IPv4 routing

provides simple manually configured IPv4 routing

• Routing Information Protocol (RIP)

uses a distance vector algorithm with UDP packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection

• IP performance optimization

provides a set of tools to improve the performance of IPv4 networks; includes directed broadcasts, customization of TCP parameters, support of ICNP error packets, and extensive display capabilities

• Unicast Reverse Path Forwarding (uRPF)

limits erroneous or malicious traffic in accordance with RFC 3074

Static IPv6 routing

Overview

provides simple, manually configured IPv6 routing Routing Information Protocol next generation (RIPng) extends RIPv2 to support IPv6 addressing

OSPFv3

provides OSPF support for IPv6

IS-IS for IPv6

extends IS-IS to support IPv6 addressing

BGP+

extends BGP-4 to support Multiprotocol BGP (MBGP), including support for IPv6 addressing

Multiprotocol Label Switching (MPLS) Layer 3 VPN

allows Layer 3 VPNs across a provider network; uses MP-BGP to establish private routes for increased security; supports RFC 2547bis multiple autonomous system VPNs for added flexibility

Multiprotocol Label Switching (MPLS) Layer 2 VPN

establishes simple Layer 2 point-to-point VPNs across a provider network using only MPLS Label Distribution Protocol (LDP); requires no routing and therefore decreases complexity, increases performance, and allows VPNs of non-routable protocols; uses no routing information for increased security; supports Circuit Cross Connect (CCC), Static Virtual Circuits (SVCs), Martini draft, and Kompella-draft technologies

Virtual Private LAN Service (VPLS)

establishes point-to-multipoint Layer 2 VPNs across a provider network

IPv6 tunneling

provides an important element for the transition from IPv4 to IPv6; allows IPv6 packets to traverse IPv4-only networks by encapsulating the IPv6 packet into a standard IPv4 packet; supports manually configured, 6to4, Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) tunnels, and IPv6 on VPN to Provider Edge (6VPE) router tunnel

Quality of Service (QoS)

IEEE 802.1p prioritization

delivers data to devices based on the priority and type of traffic

• Flexible classification

creates traffic classes based on access control lists (ACLs), IEEE 802.1p precedence, IP, and DSCP or Type of Service (ToS) precedence; supports filter, redirect, mirror, remark, and logging

Bandwidth shaping

Port-based rate limiting

provides per-port ingress-/egress-enforced increased bandwidth

Classifier-based rate limiting

uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port

o Reduced bandwidth

provides per-port, per-queue egress-based reduced bandwidth

Broad OoS feature set

provides support for Strict Priority Queuing (SP), Weighted Fair Queuing (WFQ), Weighted Deficit Round Robin(WDRR), SP+WDRR together, configurable buffers, Explicit Congestion Notification (ECN), and Weighted Random Early Detection (WRED)

Traffic policing

supports Committed Access Rate (CAR) and line rate

Layer 3 services

Address Resolution Protocol (ARP)

determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network

• User Datagram Protocol (UDP) helper

redirects UDP broadcasts to specific IP subnets to prevent server spoofing

Overview

• Dynamic Host Configuration Protocol (DHCP)

simplifies the management of large IP networks and supports client and server; DHCP Relay enables DHCP operation across subnets

Management

Management interface control

enables or disables each of the following interfaces depending on security preferences: console port, telnet port, or reset button

• Industry-standard CLI with a hierarchical structure

reduces training time and expenses, and increases productivity in multivendor installations

SNMPv1, v2, and v3

provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption

sFlow (RFC 3176)

provides scalable ASIC-based wirespeed network monitoring and accounting with no impact on network performance; this allows network operators to gather a variety of sophisticated network statistics and information for capacity planning and real-time network monitoring purposes

Remote monitoring (RMON)

uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a private alarm extension group

Debug and sampler utility

supports ping and traceroute for both IPv4 and IPv6

Network Time Protocol (NTP)

synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock-dependent devices within the network so that the devices can provide diverse applications based on the consistent time

Network Quality Analyzer (NQA)

analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays and file transfer rates; allows a network manager to determine overall network performance and to diagnose and locate network congestion points or failures

Information center

provides a central information center for system and network information; aggregates all logs, traps, and debugging information generated by the system and maintains them in order of severity; outputs the network information to multiple channels based on user-defined rules

IEEE 802.1AB Link Layer Discovery Protocol (LLDP)

advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications

Connectivity

Jumbo frames

allows high-performance backups and disaster-recovery systems with a maximum frame size of 9k bytes

• Loopback

supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

• Ethernet operations, administration and maintenance (OAM)

detects data link layer problems that occurred in the "last mile" using the IEEE 802.3ah OAM standard; monitors the status of the link between two devices

Monitor link

collects statistics on performance and errors on physical links, increasing system availability

Packet storm protection

protects against unknown broadcast, unknown multicast, or unicast storms with user-defined thresholds

Flow control

Overview

provides back pressure using standard IEEE 802.3x, reducing congestion in heavy traffic situations

Security

Access control list (ACL)

supports powerful ACLs for both IPv4 and IPv6; ACLs are used for filtering traffic to prevent unauthorized users from accessing the network, or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times

Remote Authentication Dial-In User Service (RADIUS)

eases switch security access administration by using a password authentication server

Terminal Access Controller Access-Control System (TACACS+)

delivers an authentication tool using TCP with encryption of the full authentication request, providing additional security

Secure shell (SSHv2)

uses external servers to securely log in to a remote device; with authentication and encryption, it protects against IP spoofing and plain-text password interception; increases the security of Secure FTP (SFTP) transfers

DHCP snooping

helps ensure that DHCP clients receive IP addresses from authorized DHCP servers and maintain a list of DHCP entries for trusted ports; prevents reception of fake IP addresses and reduces ARP attacks, improving security

IP Source Guard

filters packets on a per-port basis, which prevents illegal packets from being forwarded

• ARP attack protection

protects against attacks that use a large number of ARP requests, using a host-specific, user-selectable threshold

Port security

allows access only to specified MAC addresses, which can be learned or specified by the administrator

IEEE 802.1X support

provides port-based user authentication with support for Extensible Authentication Protocol (EAP) MD5, TLS, TTLS, and PEAP with choice of AES, TKIP, and static or dynamic WEP encryption for protecting wireless traffic between authenticated clients and the access point

• Multiple user authentication methods

o IEEE 802.1X

uses an IEEE 802.1X supplicant on the client in conjunction with a RADIUS server to authenticate in accordance with industry standards

Web-based authentication

provides a browser-based environment, similar to IEEE 802.1X, to authenticate clients that do not support the IEEE 802.1X supplicant

MAC-based authentication

authenticates the client with the RADIUS server based on the client's MAC address

Multicast support

Internet Group Management Protocol (IGMP)

utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3

• Protocol Independent Multicast (PIM)

defines modes of Internet IPv4 and IPv6 multicasting to allow one-to-many and many-to-many transmission of information; PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM) are supported

Multicast Source Discovery Protocol (MSDP)

allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications

Multicast Border Gateway Protocol (MBGP)

allows multicast traffic to be forwarded across BGP networks separately from unicast traffic

Integration

Overview

VPN 20Gbps 11900 Firewall Module

provides enhanced stateful packet inspection and filtering; supports flexible security zones and virtual firewall containment; delivers advanced VPN services with 3DES and AES encryption at high performance and low latency; offers Web content filtering and application prioritization and optimization

Warranty and support

1-year warranty

advance hardware replacement with 10-calendar-day delivery (available in most countries)

Electronic and telephone support

limited electronic and business-hours telephone support is available from HP for the entire warranty period; to reach our support centers, refer to www.hp.com/networking/contact-support; for details on the duration of support provided with your product purchase, refer to www.hp.com/networking/warrantysummary

Software releases

to find software for your product, refer to www.hp.com/networking/support; for details on the software releases available with your product purchase, refer to www.hp.com/networking/warrantysummary

Configuration

Build To Order: BTO is a standalone unit with no integration. BTO products ship standalone are not part of a CTO or Rack-Shippable solution.

Configuration Rules

Note 1 If any 11900 switch is installed into a rack, Then this Rack Mounting kit is required.

Remarks: Default a quantity of 1 when Switch is selected.

Software Licenses

HP Unified Wired-WLAN 128 AP E-LTU

(min 0 // max 7)

REMARK: This license is for use with the Primary Controllers.

JG649AAE

See Configuration
Note:1

HP Unified Wired-WLAN 128 AP Redundant E-LTU

(min 0 // max 7)

REMARK: This license is for use with the Redundant Controllers.

Note:1

Configuration Rules

Note 1 Only supported on JG639A and JG645A.

Configuration

Remarks: JG649AAE is optional to increase the AP by a count of 128 per E-LTU

JG902AAE - Redundant access point licenses are intended for use only on a redundant controller module in a 1+1 or N+1 configuration or when extra access point capacity is

required for failover in an N+N configuration.

Fans

HP FF 11908-V Spare Fan Assy JG618A

Power Supply Cables

(std 0 // max 1) User Selection (min 1 // max 1) per DC Power Supply

JG390A

JG390A

Technical Specifications

HP FlexFabric 11908-V Switch Chassis (JG608A)

I/O ports and slots 8 I/O module slots

Supports a maximum of 384 1/10GbE ports or 192 1/10GBASE-T ports or 64 40GbE ports, or a

combination

Additional ports and

2 MPU (for management modules) slots

slots **Power supplies** 4 switch fabric slots

6 power supply slots

1 minimum power supply required (ordered separately)

Fan tray

includes: 1 x JC634A 1 fan tray slot

Physical characteristics

Dimensions 17.32(w) x 25.98(d) x 34.88(h) in (43.99 x 65.99 x 88.6 cm) (20U height)

Weight 169.53 lb (76.9 kg) chassis Full configuration weight 331.31 lb (150.28 kg)

Memory and processor

Dual Core MIPS64 @ 1.2 GHz, 512 MB flash, 8 GB DDR2 SDRAM Management module

Mounting

Mounts in an EIA-standard 19 in. rack or other equipment cabinet (hardware included); horizontal

surface mounting only

Performance

Throughput up to 5.8 Bpps (64-byte packets

Switching capacity **7.7 Tbps**

Routing table size 16384 entries (IPv4), 8192 entries (IPv6)

MAC address table size 131072 entries

Reliability

Availability 99.999%

Environment

32°F to 113°F (0°C to 45°C) Operating temperature

Operating relative

humidity

10% to 95%, noncondensing

Nonoperating/Storage

temperature

-40°F to 158°F (-40°C to 70°C)

Nonoperating/Storage

5% to 95%, noncondensing

relative humidity

Altitude up to 13,123 ft (4 km)

Acoustic Low-speed fan: 61.6 dB, High-speed fan: 72.6 dB Electrical characteristics AC Voltage 100-120/200-240 VAC, depending on configuration

> DC Voltage -48 to -60 VDC, depending on configuration

Current 16/60 A 2500 W Power output Frequency 50/60 Hz

Notes Based on a common power supply of 2,500 W (AC)

		•	•	
1310nm Transceiver (JD061A)	Connectivity	Connector type	LC	

Accessory Product Details

Physical characteristics 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17 Dimensions

cm)

Full configuration weight 0.04 lb. (0.02 kg)

Electrical characteristics Power consumption 0.8 W

typical

Power consumption 1.0 W

maximum

Cabling Cable type:

Single-mode fiber optic, complying with ITU-T G.652:

Maximum distance:

40km distance

Fiber type Single Mode

Refer to the HP website at www.hp.com/networking/services for details on **Services**

the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local HP sales

office.

HP X120 1G SFP LC LH40 1550nm Transceiver

(JD062A)

A small form-factor pluggable (SFP) Gigabit LH40 transceiver that provides a full-duplex Gigabit solution up to 40 km on a single mode fiber.

Ports 1 LC 1000BASE-LH port (no IEEE standard exists for 1550 nm optics)

Connectivity Connector type

Wavelength 1550 nm

Physical characteristics Dimensions 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17

cm)

Full configuration weight 0.04 lb. (0.02 kg) 0.8 W

Electrical characteristics Power consumption

typical

Power consumption 1.0 W

maximum

Cabling Cable type:

Single-mode fiber optic, complying with ITU-T G.652;

Maximum distance:

40km distance

Fiber type Single Mode Services Refer to the HP website at www.hp.com/networking/services for details on

> the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local HP sales

office.

HP X125 1G SFP LC LH70

A small form-factor

pluggable (SFP) Gigabit

LH70 transceiver that

provides a full-duplex Gigabit solution up to

70km on a single-mode

Transceiver (JD063B)

Ports

1 LC 1000BASE-LH port (no IEEE standard exists for 1550 nm optics)

Connectivity Connector type LC

> Wavelength 1550 nm

Physical characteristics

Dimensions 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17

cm)

Full configuration weight 0.04 lb. (0.02 kg)

Electrical characteristics Power consumption 0.8 W

typical

Accessory Product Details

fiber. **Power consumption** 1.0 W

maximum

Cabling Cable type:

Single-mode fiber optic, complying with ITU-T G.652;

Maximum distance:

• 70km

Fiber type Single Mode

Services Refer to the HP website at www.hp.com/networking/services for details on

0.8 W

the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local HP

sales office.

1 RJ-45 1000BASE-T port (IEEE 802.3ab Type 1000BASE-T) HP X125 1G SFP Ports

RJ45 T Transceiver (JD089B)

Connectivity **Physical** characteristics **Connector type**

2.71(d) x 0.54(w) x 0.55(h) in. (6.88 x 1.37 x 1.4 cm) **Dimensions**

Full configuration weight 0.07 lb. (0.03 kg)

A small form factor pluggable (SFP) Gigabit 1000Base-T transceiver that provides a full duplex Gigabit solution up to

100m on a Cat-

5+ cable.

Electrical characteristics

Cabling

Power consumption maximum 1.0 W Cable type:

Power consumption typical

1000BASE-T: Category 5 (5E or better recommended), 100 Ù differential 4-pair unshielded twisted pair (UTP) or shielded twisted pair (STP) balanced, complying with IEEE 802.3ab

1000BASE-T;

Maximum distance:

• 100m

Services Refer to the HP website at www.hp.com/networking/services for details on the service-

level descriptions and product numbers. For details about services and response times in

your area, please contact your local HP sales office.

Summary of Changes

Date	Version History	Action	Description of Change:
12-Dec-2014	From Version 9 to 10	Removed	Deleted SKU JG325A
18-Aug-2014	From Version 8 to 9	Added	New accessory: JG918A
_		Changed	Product overview updated
			Configuration menu updated
			Technical Specifications updated
02-Jul-2014	From Version 7 to 8	Changed	Minor change on Overview section.
10-Jun-2014	From Version 6 to 7	Added	Added a new accessory: JG372A
31-Mar-2014	From Version 4 to 6	Changed	Transceivers were revised.
14-0ct-2014	From Version 3 to 4	Added	Added a new Transceiver in two locations in the Configuration section.
30-Sept-2014	From Version 2 to 3	Added	HP 10500/11900/7500 20Gbps VPN FW Mod was added to Modules.
12-Jul-2014	From Version 1 to 2	Changed	Made minor changes to the Configuration section.
